EXPERIENCE

Karma Play Limited

Jul 2025 - Feb 2026 **Multiplayer Game Developer Intern**

- Worked on **Aquaverse**, a multiplayer Unity game using **Coherence Multiplayer** for real-time synchronization. Designed and implemented multiplayer gameplay systems ensuring smooth networked interactions.
- Collaborated with a professional game development team to improve gameplay mechanics and workflow efficiency.

Eklavya.me

Nov 2025 - May 2026 **Developer Intern**

- Built full-stack educational applications with **React.js**, **Node.js**, **Express.js**, and **RESTful APIs**, implementing **asynchronous** data fetching and normalized state management.
- Improved frontend performance via **code-splitting** and memoization, and developed backend services handling **concurrent requests** with middleware-based auth and error handling.

DARKCITY ATELIER

Jan 2026 - Present **Unity Developer Intern**

- Developing a **server-authoritative** multiplayer card game in **Unity** and **Photon Fusion** with **tick-based deterministic simulation**.
- Implementing gameplay systems, **multiplayer synchronization**, and interactive game mechanics for real-time gameplay. Testing, debugging, and optimizing gameplay performance while collaborating with designers and developers.

PROJECTS

3D Wildlife AR

C#, Python, Unity, Azure, YOLOv11
Demo: [Wildlife-AR](#)

- Led development of a cloud-connected **AR** application performing real-time wildlife detection via a trained **YOLOv11** model served through an **asynchronous, multithreaded inference pipeline**.
- Architected low-latency **REST** communication between **Unity** clients and **Azure**-hosted inference endpoints, decoupling detection, rendering, and **UI threads** to avoid frame drops.
- Integrated AI-powered species-lookup and interactive **3D visualization**, applying **scalable** architecture and modular design patterns.

Nightfang: Vampire Hunt

Unity, C#
Demo: [Vampire-Hunt](#)

- Developed a **2D** vampire shooter with an **event-driven architecture**, **object pooling** for bullets/enemies, and optimized **collision detection** to sustain stable **FPS**.
- Implemented core **gameplay systems** – shooting, enemy **AI**, health management, and scoring – using **OOP** design for modularity and maintainability. Profiled and debugged gameplay systems in **Unity Profiler** to reduce **memory allocations** and improve runtime stability.

TECHNICAL SKILLS

Languages: C++, C#, Java, C, JavaScript, Python

Game Dev & Systems: Unity, Multithreading, Job System, Object Pooling, Memory Optimization, Unity Profiler, Physics & Collision Systems

Networking: Photon Fusion, Coherence Multiplayer, , State Sync, Deterministic Simulation, REST APIs

3D & AR: 3D Modeling, AR Development

Web & Tools: React.js, Node.js, Express.js, Git/GitHub, Agile, OOP, Data Structures & Algorithms
