SUMMARY

Unity Developer with hands-on experience in AR/VR application development, gameplay architecture, and cross-platform (PC/Mobile) builds using Unity and C#. Strong foundation in Object-Oriented Programming, Software Design Patterns, and the Unity Profiler for performance optimization. Experienced with multiplayer systems (Photon Fusion, Coherence Multiplayer), REST API integration, and Agile/Scrum workflows. Quick to learn new SDKs, rendering pipelines, and tools, with a track record of collaborating closely with designers, artists, and backend developers to ship interactive, immersive experiences.

SKILLS

Core C# Development : C#, MonoBehaviour Framework, Object-Oriented Programming (OOP), Generics, Software Design Patterns (Factory, Abstract Factory, Singleton, Command, Strategy), & Reusable Code, REST API Consumption, Code Documentation

Unity Engine : Unity3D, Unity 6, URP/HDRP Pipelines, Lighting, Materials & Post-Processing, GPU Instancing, Animation System & Blend Trees, Rigging & IK Systems, Rigidbody, Colliders & Physics Materials, Unity Addressables & Asset Bundles, Particle Systems, Unity Profiler & Performance Optimization, Unity Job System

AR/VR & Multiplayer : AR Application Development, VR Fundamentals, Photon Fusion, Coherence Multiplayer, Multiplayer Systems, Object Pooling, Real-Time Player Interactions

Tools & Methodologies : Git, GitHub, Agile/Scrum Methodologies, JIRA (basics), CI/CD Awareness, Cross-Platform Development (PC, Mobile/Android, AR), Debugging & Optimization

Programming Languages : C#, C++, C, Java, JavaScript, Python

3D, Graphics & Cloud : Blender (3D Modeling), Azure, Machine Learning Model Integration (YOLOv11), Data Structures & Algorithms

EXPERIENCE

DARKCITY ATELIER

Jan. 2026 – Present

Unity Developer Intern

- Gameplay Architecture & Feature Development:** Architecting and developing gameplay systems for a multiplayer card game in **Unity3D**, applying **C#**, **OOP**, and Software Design Pattern principles to write decoupled, reusable code, with multiplayer mechanics implemented using **Photon Fusion**.
- Performance Optimization:** Testing, debugging, and optimizing gameplay performance using the **Unity Profiler**, addressing rendering and draw-call bottlenecks under guidance from senior developers.
- Cross-Functional Collaboration:** Collaborating with designers and developers to define, design, and ship new features; participating in code reviews and Agile workflows to maintain code quality and organization.

Karma Play Limited

Jul. 2025 – Feb. 2026

Multiplayer Game Developer Intern

- Multiplayer Gameplay Systems:** Developed gameplay features for **Aquaverse**, a multiplayer Unity3D game, implementing real-time player interactions, networked state synchronization, and object pooling for performance.
- Agile Team Collaboration:** Collaborated with designers and developers in an Agile/Scrum environment, contributing to sprint planning, bug-fixing, and iterative feature delivery.

PROJECTS

🔗 3D Wildlife AR *Unity3D, C#, Python, Azure, YOLOv11*

- AR Application Development:** Architected a Unity-based AR application for real-time wildlife detection, implementing immersive UI/UX for mobile AR environments and integrating AR SDK workflows.
- Cloud & ML Integration:** Integrated a **YOLOv11** machine learning model via **Azure** and REST API calls into the Unity pipeline, demonstrating cross-platform build and deployment workflows.

🔗 Nightfang: Vampire Hunt *Unity3D, C#*

- Gameplay Systems:** Built a 2D vampire shooter implementing player combat, enemy AI, health management, scoring, and progression systems using event-driven architecture and Design Pattern principles (State, Observer).
- Performance & Physics:** Used the **Unity Profiler** to identify and resolve performance bottlenecks; applied object pooling, particle systems, and physics/collision optimization to keep gameplay smooth across devices.
